NOVELL

Upgrading to Novell Netware 6 (bespoke)

Duration 5 days

Course Overview. This course focuses in the new features unique to Novell Netware 6 and is designed to provide delegates with comprehensive experience and education in the value propositions of Novell Netware 6. Delegates will see the high availability and scale ability of Netware 6, which means that they will work with the clustering and storage capabilities of the product. They will also learn the 'anywhere, anytime' access features of Netware 6, which include hands-on experience with iFolder, iPrint, NFAP, Netware Web Access – and the management products which ship with Novell Netware 6.

Delegates Will Learn How To:

- Install, upgrade, migrates, deploy and configure Novell Netware 6
- Configure and use Novell Netware 6 administration components
- Configure and eDirectory 8.6
- Evaluate, design and implement a high-availability NCS solution
- Configure and use Novell Netware 6 user access components

Prerequisites: Delegates should be Netware 5 CNE's or have equivalent experience. Alternatively, Netware 4 CNE's should take the Netware 4 to Netware 6 CNE Upgrade Prerequisites course first. Also, candidates should be familiar with IPX to IP Migration and should know how to integrate Netware and NDS with other operating systems such as Windows NT or Unix.

Course Outline: Installing, upgrading, migrating, deploying and configuring Netware 6; configuring and using Netware 6 high availability components; configuring and using Netware 6 storage and directory services; configuring and using Netware 6 user access components; configuring and using Netware 6 administration components.
